What is Blockchain Technology?

Blockchain is a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network. An asset can be tangible (a house, car, cash, land) or intangible (intellectual property, patents, copyrights, branding).

- The faster it's received and the more accurate it is the better. Blockchain is ideal for delivering that information
- Virtually anything of value can be tracked and traded on a blockchain network, reducing risk and cutting costs for all involved.
- A blockchain network can track orders, payments, accounts, production and much more.

What is Smart Contract?

1. Distributed

Everyone on the network is guaranteed to have a copy of all the conditions of the smart contract and they cannot be changed by one of the parties. A smart contract is replicated and distributed by all the nodes connected to the network.

2. Deterministic

Smart contracts can only perform functions for which they are designed only when the required conditions are met. The final outcome will not vary, no matter who executes the smart contract.

3. Transparent

Smart contracts are always stored on a public distributed ledger called blockchain due to which the code is visible to everyone, whether or not they are participants in the smart contract.

Why Decentralized Blockchain is best?

What is Centralized Blockchain?

The technology can and often is used to build private blockchains. These blockchains are controlled by a single individual or company and therefore, centralized. A popular alternative to private blockchains are public blockchains, which are decentralized and open to anyone.

What is Decentralized Blockchain?

In the blockchain, decentralization alludes to the transfer of supervision and decision-making from a centralized association (individual, corporation, or group of people) to a dispersed network. Decentralized networks endeavor to decrease the degree of trust that members should put in each other and dissuade their capacity to put forth authority or command over each other in

FAQ

Is the liquidity locked on PancakeSwap?

Yes. Liquidity is locked for 10 years on the Binance Smart Chain.

Is the liquidity burned on PancakeSwap?

Yes. Liquidity is burned & transfer it on zero / null address on the Binance Smart Chain.

How many liquidity locked on PancakeSwap?

85% token is locked & burned on Binance Smart Chain.

FAQ

How many Token to be burned on every Buy / Sell / Transfer?

0.1% token to be burned from every Buy / Sell / Transfer.

How to Earn Bonus from KGC Token?

You can earn money in KGC Token by opening new accounts with certain financial institutions and participating in the digital token-based economy supported by bonuses. These bonuses will not end here; instead, you will be able to earn from various other offers based on your investment and profit.

FAQ

Does it matter whether I buy KGC Token on the Binance Smart Chain (BEP20) ?

Generally no, Because there is a bridge that you can use at any time, the pricing of the tokens remain relatively the same. For example, if you purchase KGC Token on the Binance blockchain, and then when you are ready to sell you see that the price of KGC Token is slightly higher on the Binance Smart Chain, you can always bridge your tokens to the Binance Smart Chain and sell for the higher price. There is no fee to bridge.

WHY KGC is METAVVERSE TOKEN

- **Open:** You don't need to apply for anything or "open" an account. You just get access by creating a wallet.
- **Pseudonymous:** You don't need to provide your name, email address, or any personal information.
- **Flexible:** You can move your assets anywhere at any time, without asking for permission, waiting for long transfers to finish, and paying expensive fees.
- **Fast:** Interest Rates and rewards often update rapidly (as quickly as every 15 seconds), and can be significantly higher than traditional Wall Street.
- **Transparent:** Everyone involved can see the full set of transactions (private corporations rarely grant that kind of transparency).

FAQ

Why KGC Token?

- **Zero Human Factor:** The human factor is not taken into consideration. The smart contract is not dependent on anyone, and there is no way to prevent the platform from functioning
- **Referral Provides:** There are no hidden fees, and all funds are transferred between members without any intermediaries. The contract balance is always a negative number.
- **Immutability of Conditions:** Nobody has the authority to ban you from the platform because the contract does not contain a provision for such a restriction.
- **Decentralization:** Instead of having managers or administrators in charge, there are only creators who are members of the community on the platform, just like everyone else.
- **Instant Transactions:** Profits earned by other members are transferred directly into your personal wallet. There is no hoarding in the system, and all of your earnings are yours to keep.
- **Transparency and Anonymity:** Because the smart contract code is public because anyone can view the complete history of all transactions. This ensures that the conditions are pure and that the platform statistics are accurate.
